

# IoT Benefits

## MINIMIZING LOSS OF ASSETS AND EQUIPMENT

---

The IoT is a huge industry that has the potential to save companies money and increase their profitability. In this article, we will discuss how IoT tracking leads to cost savings by minimizing loss of assets and equipment.

The internet of things (IoT) is a network of physical devices, vehicles, buildings, and other items embedded with electronics, software, sensors, and network connectivity that enables these objects to collect and exchange data. IoT allows objects to be sensed and controlled remotely across existing network infrastructure, creating opportunities for more direct integration of the physical world into computer-based systems, resulting in improved efficiency, accuracy, and economic benefit.

IoT tracking leads to cost savings by minimizing loss of assets and equipment. With IoT tracking, you can monitor the location of your equipment at all times. If something happens to it—like theft or damage—you can easily locate its last known location through GPS tracking software. This gives you a better idea of where it might be now so you can take action immediately rather than waiting for someone else to report it missing.

## SAFETY AND SECURITY

---

Losing or damaging valuable equipment can have serious financial consequences for any company. When an asset is lost, it must be replaced. Often, replacements aren't exactly the same as old equipment, resulting in needless wasted time and money spent not just on purchasing new equipment, but potentially training employees on new systems, and even having to pay for additional or increased insurance costs.

Furthermore, depending on the type of business you are running, lost, stolen, or damaged equipment could also put you out of business entirely if it's impossible for you to replace your equipment quickly enough. For example, if you're in the construction industry and have lost your construction crane after a storm destroyed it, then this would mean many days without being able to complete projects which could potentially result in lost revenue from paying customers who cannot use their homes or businesses because they are being rebuilt by another company's crew instead!

## THE CROWDKEEP SOLUTION

---

IoT tracking allows companies to better manage their assets by providing them with real-time information about where each piece of equipment is located so they can keep tabs on it at all. By enabling companies to track their assets and equipment in real-time, IoT tracking makes it possible for them to minimize the loss of those assets and equipment. This not only helps them save money but also allows them to provide better customer service by maintaining project schedules and deliveries.

Contact us today to have one of our in-house specialists provide you with detailed benefits of using one of more of Crowdkeep's IoT solutions.
